

■ Minors' Access to STI Services

BACKGROUND: Over the past 30 years, states have expanded minors' authority to consent to health care, including care related to sexual activity. All 50 states and the District of Columbia allow most minors to consent to testing and treatment for sexually transmitted infections (STIs), and many explicitly include testing and treatment of HIV. Many states, however, allow physicians to inform parents that the minor is seeking or receiving STI services when they deem it in the best interests of the minor.

HIGHLIGHTS:

- All 50 states and the District of Columbia explicitly allow minors to consent to STI services, although 11 states require that a minor be of a certain age (generally 12 or 14) before being allowed to consent.
- 31 states explicitly include HIV testing and treatment in the package of STI services to which minors may consent.
- 18 states allow physicians to inform a minor's parents that he or she is seeking or receiving STI services; however, with the exception of 1 state that requires parental notification in the case of a positive HIV test, no state requires that physicians notify parents.

Advancing sexual and reproductive health worldwide through research, policy analysis and public education.

* Physician may inform parents of minor's decision to consent to HIV/AIDS services if the minor is younger than 16.

† Physician must report a positive test result if the minor is younger than 12.

‡ A parent must be notified of a positive HIV test result.

Ω The state funds a statewide program that gives minors access to STI services.

Φ Parent must be notified if the minor's health or life is at risk.

Ψ Does not include right to consent to HIV/AIDS treatment.
